Professional Summary

Full Stack Blockchain Developer with 2+ years of experience building secure, scalable DeFi and Web3 infrastructure across EVM networks. Experienced in smart contract architecture, token launchpads, staking systems, cross-chain bridges, and high-performance trading bots. Strong expertise in Solidity, Node.js, and Next.js with focus on gas optimization, secure contract design, event-driven backend systems, and production-grade deployments.

Core Competencies

- Blockchain: Solidity, Ethereum, Tron, Smart Contracts, Hardhat, Foundry, Web3.js, Ethers.js
- Token Standards: ERC-20, ERC-721/721A, ERC-1155
- Backend: Node.js, Express.js, FastAPI, MongoDB, Redis, RabbitMQ, GraphQL, REST APIs
- Frontend: React.js, Next.js, TypeScript, Redux, TailwindCSS
- Testing & Security: Chai, Mocha, Postman, Slither
- Dev Tools: Git, GitHub, GitLab
- Programming: Java, C++, Python

Professional Experience

Full Stack Blockchain Developer

Giftswap Technologies (Chainbull) | Oct 2025 – Present

- Leading development of three production-grade blockchain projects within the Chainbull ecosystem.
- Designed and deployed secure smart contracts using Solidity with optimized gas efficiency and upgradeable architecture.
- Built scalable backend services using Node.js and Express for Web3 integrations and transaction orchestration.
- Developed responsive frontend interfaces using React.js with wallet connectivity and real-time blockchain data rendering.
- Implemented role-based access control, contract event indexing, and secure transaction handling.
- Collaborated with cross-functional teams to deliver production-ready decentralized applications.
- Improved performance and reduced RPC latency by optimizing blockchain calls and caching mechanisms.

Full Stack Blockchain Developer

Velvosoftware Technologies, Noida, India | July 2024 – August 2025

- Developed and deployed Kalis Chain Wallet, a browser extension enabling multi-chain token transfers, NFT management, and seamless user onboarding.
- Designed a decentralized Token Launchpad for secure token creation with time-locks and configurable launch models (fair/standard).
- Built a Staking & Wallet Platform with flexible lock-in periods, tiered rewards, and enhanced DeFi security, increasing platform adoption.
- Engineered a Cross-chain Bridge and ZXUSD Stablecoin ecosystem, supporting fast, secure asset transfers across ZEUS, Olympus, Ethereum, BNB Chain, Base, and Polygon.
- Optimized blockchain applications using React, Node.js, and Solidity, improving scalability and responsiveness.

Node.js & Blockchain Developer

Metageeks Technologies, Delhi, India | January 2024 – April 2024

- Built a Telegram-based multichain trading bot with trading execution and risk management for spot and perpetual markets.
- Developed and deployed ERC-20 staking smart contracts, ensuring secure reward distribution.
- Enhanced Node.js backend logic, reducing API response times and improving trading reliability.

Node.js & Blockchain Developer

Indicchain (Mobiloitte Technologies), Delhi, India | July 2023 – January 2024

- Developed server-side APIs for Ethereum blockchain interactions, improving system reliability.
- Authored, tested, and deployed smart contracts with Hardhat, Foundry, Web3.js, Ether.js, and MetaMask.
- Conducted smart contract audits using Slither, identifying and resolving vulnerabilities.
- Automated testing with Chai and Mocha, reducing manual QA efforts and enhancing deployment stability.

Key Projects

Chainbull Marketplace (Next.js, TypeScript, Solidity, Node.js, SPL Token, Fast API)

- Developed a Web3 marketplace platform enabling ERC-20 token creation, escrow-based transactions, and multisender utilities.
- Integrated dynamic smart contract deployment from frontend with secure parameter validation.
- Implemented backend APIs for transaction logging and contract interaction monitoring.

Presale Launchpad (Node.js, Next.js, Solidity)

- Built a decentralized token presale system with softcap/hardcap validation and vesting logic.
- Implemented automated allocation mechanisms and USDT-based webhook payment verification.
- Developed real-time analytics dashboard for presale monitoring.

CoinTelegram MLM Trading Bot (Telegram Mini App, Node.js, GraphQL)

- Engineered a referral-based MLM trading automation platform integrated with Telegram.
- Designed commission distribution logic and wallet-based payout handling.
- Developed GraphQL APIs for user management, transaction tracking, and trade execution.

Staking & Wallet Platform (React, Solidity, Node.js)

- Developed DeFi staking platform with tiered rewards and configurable lock-in periods.

Cross-chain Bridge & ZXUSD Stablecoin (React, Solidity, Node.js)

- Built cross-chain asset transfer mechanism supporting multiple EVM networks.

NFT Marketplace (React.js, Node.js, Solidity)

- Developed NFT minting and trading platform with wallet integration.

Hex Storage (React Vite, Node.js, Solidity)

- Designed blockchain-backed storage system for secure PDF document management.

Education

Master of Computer Applications (MCA)

DSEU Shakarpur-II Campus (BPIBS), New Delhi, India | 2021 – 2023

B.Sc. (Hons.) Computer Science

Dyal Singh College, University of Delhi, India | 2018 – 2021
